Notes on the operating manual

Dear customer,

Congratulations on your purchase. You have acquired a reliable quality product by "AS-Motor Germany".

This product has been manufactured according to modern manufacturing methods and comprehensive quality assurance measures. Only when you are satisfied with your device have we attained our goal.

These operating instructions contain important information to help you avoid hazards and to increase the reliability and the life span of the device.

Read the operator's manual before using the device. Share these operating instructions with other users of the device.

Contact

If you have questions about your device, please contact your customer service.

For international AS partners, please see: www.as‑motor.com.

Device data

Please fill in all data referring to your device. When ordering spare parts, provide your dealer with the serial and engine numbers.

Serial number (see manufacturer's certificate or type plate):

Engine number:

Date of purchase:

Address of dealer:

Intended use

The device is exclusively intended for mowing well maintained grassed lawn areas.

Any other use exceeding this purpose is inadmissible.

Observe the instructions chapter for Maintenance. Otherwise, operational safety is endangered.

The user of the device is responsible for accidents or damage that can happen to other persons or their property.

The device must not be used:

– To cut hard objects, rocks, rubble, or pieces of wood.
– To trim bushes, hedges, and shrubbery.
– To cut plants in flower pots or planters or on rooftops.
– To clean (vacuum) footpaths.
– As shredder for shredding tree and hedge cuttings.
– As drive unit for work tools and any type of tool sets that are not authorised by "AS-Motor Germany".
Explanation of the symbols

Symbols in the instructions
In these operating instructions, the following symbols are used to denote special dangers.

⚠️ Warning. These symbols denote special dangers.

🚫 Prohibition sign. These symbols denote inadmissible procedures.

гер Directive sign. These symbols denote required protective measures.

Symbols in the text
1. A numbered text requests you to act or shows a process sequence.
   - An indented arrow marks the result of a step.
   - An arrow that is not indented refers to the result of a sequence of actions.

Notice: An additional piece of information is marked by the work "Notice" written in bold letters.

Warnings
In these operating instructions, warning instructions are marked with signal words. The signal words are used to indicate the following hazards and potential consequences.

⚠️ Danger
Imminent danger
Indicates an imminently hazardous situation with a high level of risk that, if not avoided, will result in minor or moderate injury.

⚠️ Warning
Hazardous situation
Indicates a possibly hazardous situation with a medium level of risk that, if not avoided, could result in minor or moderate injury.

⚠️ Caution
Hazardous situation
Indicates a possibly hazardous situation with a low level of risk that, if not avoided, could result in minor or moderate injury.

Notice
Danger of property damage
Indicates a possible risk of damage of the device and its surroundings.

Signs on the device
- Working with the device requires extreme cautiousness. Read the operating instructions before you use the device.
- Risk of injury! Make sure that no one is within the danger zone of the device. Objects may be ejected.
- The quickly rotating blade can cause life threatening injuries or immense property damage! Be especially careful to keep your hands and feet away from the blade when the device is put into operation.
Prior to any repair and maintenance work, pull off the spark plug connector.

Clean the ventilation grid! The cooling air of the motor is sucked in through the ventilation grid of the engine cover. Always keep the entire surface open and free!

Operate the device only when grass collection bag or impact protection is fitted.

Noise is causing health problems. Use personal ear protection to avoid hearing damage.

Hot surface. Do not touch the engine or the silencer. They become very hot during operation and you can get burned.

Do not clean the device with water spray or high-pressure cleaner!

Type plate

The type plate on the device provides you with information on the device type and the technical data.

1. Name and address of the manufacturer
2. Device designation
3. Type designation
4. Rated power output in kW / engine speed
5. Weight
6. Year of manufacture
7. Serial number
8. CE marking
9. Sound level $L_{WA}$

Type overview

In this operating manual, the following device types are described. Depending on their equipment, the corresponding descriptions of this operating manual apply.

<table>
<thead>

Safety instructions

Get informed!

For your safety, read these operating instructions carefully. Familiarize yourself with the control elements and the proper use of the device. Share these operating instructions with other users of the device.

Have skilled personnel who were trained by AS-Motor show you the safe handling of the device before you work with it for the first time.

Get familiar with the device in a wide, open and flat terrain first.

User restrictions and hours of operation

Never allow children or persons who are not familiar with the operating instructions to use the device. Persons under 18 years of age may operate the device only under proper supervision. Local regulations determine the minimum age of the operator and the operating times.

Unsuitable for operation of the device are persons who
– are under the influence of alcohol, drugs or reaction-retarding medicines.
– have physical and mental/emotional impairments.
– are tired or sick.

People fitted with pace makers are not allowed to touch any current-carrying parts of the ignition system.

Safe handling of fuel

Fuel is toxic and highly flammable. There is a burn and explosion hazard!

Keep fuel away from ignition sources and do not smoke during handling.

Do not inhale fuel vapours, they are dangerous to your health.

Use gloves and avoid skin contact with the fuel.

Always refuel outdoors when the engine is cold and stopped completely. When doing so, always use a filler spout or a funnel.

Do not spill any fuel or do not let fuel enter canalisation or drain away.

When fuel has overflowed, do not start the device until the fuel vapours have evaporated (wipe dry). Move the device away from the spilled fuel.

Always close the tank cap tightly and do not open it while the engine is running or the device is still hot.

Empty the fuel only when outdoors. Use the approved container for this or run the fuel tank empty.

Store the fuel away from children and keep it in a suitable container in a dark, cool and dry place.

Never store the device when there is fuel in the tank inside a building where fuel vapours might come into contact with open fire or sparks.

Immediately replace the fuel tank or tank cap if they are damaged (authorised service centre).
First aid
When swallowing fuel or inhaling fuel vapours, do not force vomiting and immediately consult a doctor.

In case of skin contact, immediately wash with water and soap. Change your soiled clothing as soon as you can.

Measures in case of a fire
In case of a fire, use foam, dry powder extinguisher, or carbon dioxide (CO₂). Never douse with water!

Check the device prior to use
Prior to each use, check the blade, protection skirt, covers, drive and fastening parts, cables and cable connections for proper working condition and firm seating by visual inspection.

Never use the device with defective or missing covers or impact protection.

Do not remove, change or override any safety devices or control elements.

Observe the maintenance instructions (see chapter Maintenance).

Have an authorised service centre check your device if the blade does not stop within 3 seconds.

Danger area
Within the danger area of the device, there is a risk of injury.

The rotating knife can cause injuries and objects can be thrown out. The area in front of and to the right of the device is especially dangerous.

On slopes, the device can topple over and slide towards persons or run them over.

Make sure
– that nobody else besides the user is on the mowing area.
– that people are never positioned in the direction of travel in front of the device.
– that nobody is positioned on the slope below the device.
– that you have a complete overview of the danger area at all times.
– that you keep your hands and feet away from the rotating parts.
Use caution during operation

Danger of injury during motor start
Do not start the engine
– if fuel was spilled.
– in closed or poorly ventilated rooms (danger of poisoning!).
– if there are other persons nearby.
Start the device only when your feet are at a safe distance to the blade.
Start the device only when the starter rope is fixed to the guide.
When the engine is started, do not tilt the device.

Risk of injury when the motor is running
Switch off the engine and wait until the blade stops
– before you tilt or transport the device.
– before you step away from the device, even for just a short time.
– when you drive on surfaces other than grass.
– before you adjust the cutting height.
– before you refuel.
Switch off the engine and wait until the blade comes to a standstill, and pull off the spark plug connector
– before you clean or check the device or before you carry out work on the device.
– before you unblock or unclog the discharge area.

Risk of burns
Do not touch the engine or the silencer. These parts become very hot during operation and you can get burned. If a jumpy movement occurs, the risk of additional injuries can result.

Prior to mowing

Personal protective measures

- During mowing, always wear safety shoes with good grip and long trousers. Do not mow with open sandals or while shoeless.
- Wear safety gloves to protect yourself against injuries and vibrations.
- Noise is causing health problems. Use personal ear protection to avoid hearing damage. Wear safety glasses and headgear.
- Ask your specialised dealer about suitable protective equipment.

Preparing the mowing area
Prior to mowing, carefully check the perimeter of the lawn. Remove rocks, pieces of wood, bones, wires, and other objects that could be picked up and thrown out by the device.
Remove live cables from the mowing area. These can be damaged during mowing and cause an electric shock or short circuit.

Use caution when mowing

Risk of injury
Risk of injury caused by ejected objects. Never mow when persons, children, pets or material assets are in the danger area.
Keep your hands and feet away from the rotating parts. Keep a distance to the ejection area while working with the device.
Make sure that help can be provided in case of an emergency.
Never remove the impact protection. The rotating knife can cause injuries and objects can be thrown out.
Only mow during daylight or with adequate artificial lighting. Never mow in the event of uncertain weather conditions and risk of lightning.
Be especially carefully when mowing on soft ground, nearby landfills, ditches, dikes and water edges.

Avoid mowing damp grass, there is a sliding risk!

Be extremely cautious when turning the device round or pulling it toward you and when moving in reverse.

Always walk slowly!

Never lift or carry the device when the engine is running.

Pay attention to traffic when working close to roads.

**Vibrations**

When the device is used over a longer period of time, vibrations can cause disturbances in the blood supply of the hands. A generally accepted usage time cannot be determined.

- Use gloves.
- Take breaks on time.

Have an authorised service centre check the device

- when the blade has hit an object.
- if the device starts to vibrate unusually severely.

**Mowing surfaces with fire hazard**

- Carry a sufficient amount of suitable extinguishing agent.

- If side inclination is too great, fuel may leak from the carburetor or the tank. This poses a fire hazard!

- Observe the mowed surface also after moving is completed to ensure that no fire will start.

To avoid risk of fire, keep the following components free of dirt, grass, hay, leaking oil, grease, etc.:

- Engine
- Silencer (manifold, guard, clearances)
- Area around the fuel tank

**Caution when mowing slopes**

Risk of injury during mowing on slopes due to tipping over or sliding.

- Mow on steep terrain only when safe operation can be guaranteed.
- Do not mow excessively steep slopes.
- Take suitable precautions on steep slopes, e.g. by using step irons.
- Always mow crossways to the slope, never upwards or downwards.
- Always pay attention to step safely, wear non-slip safety shoes.
- Be extremely cautious when changing the direction.
- Mow only when the ground is dry and has a good grip.

When facing downhill, the device can roll away. Park the device on level ground only and secure it against rolling away.
If the device tilts or slips
– If you attempt to stop a device that is tilting or slipping, severe injuries can result. If tilting or sliding cannot be stopped in the beginning without endangering anyone, do not continue to try to stop the device.

– Remove leaking fluids (oil, fuel, battery acid) from the device and the floor. Deposit of contaminated soil environment friendly according to the local regulation.

– Undetectable damage may have occurred to the device. In case of malfunctions, there is a risk of injury. Have an authorised service centre check the device.

When work is completed
After mowing, always close the fuel valve and the tank ventilation.

Prior to leaving the device, wait until the engine comes to a standstill and pull off the spark plug connector.

After switching it off, let the device cool down for at least 20 minutes before you store it in a dry, closed, sufficiently ventilated room.

Never store the device when there is fuel in the tank inside a building where fuel vapours might come into contact with open fire or sparks.

Use caution during maintenance and repair

Only carry out work as described in these operating instructions. Have an authorised service centre perform all other work.

Only use the blades and spare parts authorised by “AS-Motor Germany”. Unauthorised blades and spare parts can cause severe injuries.

Prior to all maintenance work, wait until the engine comes to a standstill and pull off the spark plug connector.

We explicitly point out that, in accordance with the Product Liability Act, we are not liable for damages that were caused by our devices if
– worn or damaged parts were not repaired or replaced on time.
– these damages were caused by improper repair.
– when changing a part, our original parts or parts authorised by us were not used.
– the repair work was not carried out by an authorised service station.

The same applies for spare parts and accessories.
1 Impact protection

Control elements

Handlebar AS 53 2T ES 4WD RB

Drive lever (A) (AS 53 2T ES 4WD RB)
With the drive lever, you switch the drive on and off.

Drive off (0):
Release the lever.

Drive on (I):
Press the lever towards the handlebar and continue to hold.

Engine brake lever (B)
The engine brake lever is a protection device. When you release the lever, the engine shuts down immediately, the blade comes to a standstill within 3 seconds.

Blade/engine on (I):
Press the lever towards the handlebar and continue to hold.

Blade/engine off (0):
Release the lever.

Lever for lateral adjustment of handlebar (C)
1. Release the eccentric tension lever.
2. Attention: Do not crush the Bowden cables when pivoting the handlebar.
   Swivel the handlebar to the side to the desired position.
3. Clamp the handlebar with the eccentric tension lever.

Vario lever (D)
With the vario lever, you can continuously adjust the speed of the device while the engine is running.
MIN: slow
MAX: fast

Rear brake lever (E)
You need brakes when going downhill and when you switch off the device. To brake you must release the drive lever.

Brake off (0):
Release the lever.

Brake on (I):
Press the lever towards the handlebar and continue to hold.

Parking brake on (I):
Pull the lever towards the handlebar and press the catch (1).
Reverse (F)
To switch on the reverse, you must release the drive lever. The speed in reverse is half as fast as when driving forward.

Reverse off (0):
Release the lever.
Reverse on (R):
Press the lever towards the handlebar and continue to hold.

Carburetor with choke and tickler
The choke (1) and the tickler (2) are required for the cold engine start.

Opening the choke:
Turn clockwise to the stop.

Closing the choke:
Turn anti-clockwise to the stop.

Filling carburetor with fuel:
Press the tickler briefly until the fuel flow starts.

Fuel valve (8)
1: Reserve
2: Open
3: Closed

Information on mowing
Prior to mowing, check your device for completeness, proper functioning, and cleanliness. A dirty ventilation grid causes overheating of the engine, this can damage the engine. A dirty protective grid on the silencer poses a fire hazard.

To keep the area well maintained, mow frequently and keep the grass short. Do not mow your lawn too low in dry and hot conditions because the lawn is susceptible to sun and heat damage and will look unsightly!

Only mow with a sharp and undamaged blade. Have the blade sharpened and balanced regularly (by authorised service centre).

Do not mow when the grass is wet or when it is raining. The turf may be damaged and there is a danger of slipping!

Turn the device around only in already mown sections. Do not leave the device unattended while the engine is running.

To avoid blockage during the ejection of grass, we recommend, for flat terrain, to proceed according to the mowing patterns. Mulch is shredded into much smaller pieces when you mow the terrain once again in the opposite direction.

If the grass is extremely high, mow twice at different cutting height settings.
Prior to starting

Fuel

The engine must be run on a mixture of petrol and two-stroke oil.

For possible mixing ratios, see chapter Mixing ratios fuel.

Use unleaded petrol (octane rating at least ROZ 91). You can use E10 petrol. Do not store E10 petrol longer than 30 days. Do not use fuels with more than 10 % ethanol (e.g. E15, E85).

Only use fully synthetic two-stroke oil intended for mixing in ratio 1:50. Do not use any mineral two-stroke oil.

AS-Motor recommendation:

Fully synthetic two-stroke oil TITAN 2T 100S in ratio 1:100.

Your benefits:

– **Halve oil consumption compared to 1:50** - therefore more environmentally and cost friendly.
– Optimum protection of the engine for a long service life.
– Low engine wear.
– Maximum engine performance.

You can buy Fuchs "TITAN 2T 100S" from your AS-dealer:

<table>
<thead>
<tr>
<th>Container</th>
<th>ET no.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 litres (resealable bottle)</td>
<td>G00041042</td>
</tr>
<tr>
<td>100 ml (disposable container)</td>
<td>G00041056</td>
</tr>
<tr>
<td>40 * 100 ml (disposable containers in box)</td>
<td>G00041058</td>
</tr>
</tbody>
</table>

Notice: You can find on the market ready mixed two-stroke fuels. Based on our experience, the ready mixed fuels “STIHL Motomix 1:50”, “ASPEN 2-stroke” and “Oest Oecomix” can be used. No guarantee can be given for operation of the device with other fuels and oils!

Do not use mixtures with more oil than 1:50 (e.g. 1:35).

Too much oil results in carbon deposits and reduces the service life of the engine.

Only use the fully synthetic two-stroke oils explicitly intended for mixing.

Use of engine oils or even waste oil results in engine damage.

No warranty is given in these cases.

Storing fuel mixture

The fuel mixture ages and can cause engine damages. Only mix as much fuel as you are going to use up during the next mowing.
Tanking up

⚠️ Warning

Fuel is ignited by hot engine parts.

► Prior to filling up, switch off the engine and wait for at least 20 minutes until the engine has cooled down. Observe the safety instructions regarding the fuel!

Filling up with fuel

1. For filling, use a canister with filler spout or a funnel.
2. Open the canister carefully so that existing excess pressure is slowly reduced.
3. Open the tank cap carefully so that existing excess pressure is slowly reduced and no fuel sprays out.
4. Fill the fuel tank.
5. Close the tank cap.

Adjusting cutting height

Adjust the cutting height setting only when the engine is switched off.

Set the cutting height so that the blade does not touch the ground even in case of terrain unevenness. If the cutting height is set too high, objects can be ejected and the “clean cut appearance” can be destroyed.

Attaching the starter grip

1. Pull the starter grip slowly to the rear and attach it onto the starter grip holder (1) provided for it.
Starting the device

1. Place the device on even terrain, not in high grass.
2. Pull the starter grip slowly to the rear and attach it onto the starter grip holder.
3. Close the fuel valve and the tank ventilation.
4. Plug in the plug connector.
5. Only for cold start: Close the choke at the carburetor (turn anti-clockwise).
6. Press the tickler at the carburetor until fuel flows.
7. Actuate and hold the engine brake bar.
8. Pull the starter grip slowly out until you feel resistance and then pull out quickly – engine starts to run.
9. Slowly bring the starter grip back and attach it onto the starter grip holder.
10. Reopen the choke (turn clockwise).

Driving

Warning
Risk of injury due to tripping or slipping when driving in reverse, pulling backwards and turning.
► Make sure that your path is free of obstacles and ensure safe footing.

Notice
Driving when the drive and brake are simultaneously pressed damages the brake.
► Release the drive lever when you brake.

Drive on
1. Use the vario shift lever to set the desired speed.
2. Release the brake.
3. Press the drive lever towards the handlebar – device starts moving.

Drive off:
1. Release the drive lever.

Adjusting speed
With the vario lever, you can continuously adjust the speed of the device.

Only adjust the driving speed when the engine is running; otherwise, the vario drive can be damaged.

The front axis is equipped with a permanent differential lock. This improves traction and the driving stability of the device. The danger of slipping is reduced.
Driving in reverse
During driving in reverse, only the two front wheels are driven. The speed is half as fast as when driving forward.

Drive reverse on:
1. Release the brake.
2. Release the drive lever.
3. Press the lever for the reverse gear to the handlebar – drive moves in reverse.

Drive reverse off:
1. Release the lever for the reverse.

Turning
Turn the device round only where the grass has been mowed already.

Turning round on an even surface:
1. Switch off the drive.
2. Turn the device to the desired side.
3. Switch the drive back on.

Turning round on a sloping area:
1. Keep the drive switched on.
2. Turn the device upslope.
3. Hold back the handlebar and the inner wheel.

The drive prevents sliding and supports the turn manoeuvre.

Switching off and parking

Warning
On a slope, the device can roll away.

► Put the device on even ground only or secure it against rolling away.

1. Release the drive lever.
2. Engage the parking brake.
3. Release the engine brake lever.
4. Wait for the engine to stop completely before you step away from the device.
5. Close the fuel valve and the tank ventilation.
6. Pull off the plug connector.
Transport

Switch off the engine and wait until the blade comes to a standstill before you lift the device. Two people should lift the device.

Switch off the device before every transport and let it cool down for at least 20 minutes. Close the tank ventilation and the fuel valve.

For transport, you can fold up the handlebar and the guide bar.

During transport on vehicles, secure the device against rolling, sliding, tilting, and fuel leakage.

Observe the instructions in chapter Switching off and parking.

Notice

Risk of damage due to incorrect fastening of straps.

► Fasten the straps only at the points shown in the figure.

► Do not overtighten the straps.

Use straps that support the weight of the device to secure the device.
Maintenance

⚠️ Warning
Risk of injury due to unexpected movement. When inspections are carried out, the device can move unexpectedly.
- Make sure that no persons or objects are in the danger area of the blade.
- Make sure that no further hazards result from an unexpected movement.

⚠️ Warning
Risk of injury during maintenance and cleaning work when the engine is running.
- Perform maintenance tasks only then with a running engine if this is required in the Maintenance table.

⚠️ Warning
Danger of poisoning due to poisonous exhaust gases.
- Do not operate the engine in closed or insufficiently ventilated rooms.
- Please observe the safety instruction regarding the poisoning risk.

Improper maintenance can make the device unsafe for operation and result in accidents. Regular maintenance keeps your device ready for use.

Service the device according to the following maintenance instructions.

Contact an authorised service centre if problems during maintenance occur or if you determine deficiencies during one of the following inspections.

Prior to all maintenance and cleaning work when the engine is not running:

1. Let the device cool down for at least 20 minutes.
2. Pull off the plug connector.
3. Close the fuel valve and the tank ventilation.
4. For work on the bottom side of the device, flip the device to the silencer side.

   □  By the user when the engine is running.
   ▲  By the authorised service centre.
Cleaning the device

Fig. 7: Depending on use, clean the device thoroughly, especially the bottom and the blade. Grass cuttings and dirt that are stuck interfere with the grass ejection and impair the cutting quality. To sufficiently cool the engine, keep the engine cover, ventilation grid and engine clean.

**Fire hazard!** Take particular care that the components at the silencer are clean.

For cleaning, use a hand brush. Remove stubborn dirt with a wooden or plastic spatula. Clean the outside housing parts with a cloth.

Do not clean the device with water spray or high-pressure cleaner! Do not use any aggressive cleaning agents.

**General inspection**

To make sure that the device can be operated safely, check all nuts, bolts, screws, connections of fuel lines, air filters etc. regularly for proper condition and firm seating. Check the ignition wire and the spark plug connector for damage.

Immediately replace damaged or worn parts, especially covers, impact protection, silencer, or fuel tank (authorised service centre).

Maintaining the engine

**Warning**

If the speed of rotation is set too high, objects can be ejected. The engine can be damaged and noise pollution increases.

► Do not change the basic setting of the carburetor or the speed control.

To ensure a long service life of the engine, sufficient engine cooling is required.

Keep the - engine cover (ventilation grid), - silencer (protective grid) and - cooling fins of the engine clean at all times.

**Checking the spark plugs**

**Danger**

The ignition system generates an electromagnetic field.

► Wearers of pacemakers must not work on live parts.

Soiled spark plugs reduce the engine output. Clean the electrode of the spark plug with a brass wire brush. Check the electrode gap (see “Technical data”). Make sure that the insulator around the electrode is not damaged. Never use a damaged spark plug.

Tighten the spark plug with the torque indicated in the technical data.
Maintaining the air filter

⚠️ Warning
Cleaning agents pose a fire and explosion hazard.
► Never clean the air filter with flammable solvents.

Notice
A cleaning of the air filter with compressed air damages the filter fabric and the air filter becomes useless.
► Change the air filter when it is dirty.

Notice
When you use air filters from accessory suppliers, the engine can be damaged.
► Only use the original AS-Motor air filter cartridges.

Make sure that the air filter is always clean. A dirty air filter reduces the engine performance and leads to increased engine wear and fuel consumption. Irrespective of the operating hours, change the filter insert at least once a year. Cleaning the air filter is not possible. Do not operate the engine without air filter.

Beware! When the filter is changed, accumulated dirt in the air filter can enter the carburetor and damage it.

1. Screw off the air filter cap.
2. Carefully pull out the filter element. Make sure that no dirt from the inside of the air filter housing enters the carburetor.
3. Close the suction opening with a clean cloth.
4. Thoroughly clean the inside of the air filter housing.
5. Remove rough, loose dirt from the filter element by tapping. Replace the filter element in case of heavy, stubborn dirt.
6. Remove the cloth of the suction opening.
7. Re-insert the filter element.
8. Close the air filter cap again.

Checking rear brake

⚠️ Warning
If the brakes are incorrectly adjusted, the device can roll away.
► Make sure that the brake is always functioning properly.

1. Put the device on a non-slip surface (e.g. concrete or asphalt)
2. Switch off the drive.
3. Actuate the rear brake.
4. Try to move the device.

If the rear wheels lock, the rear brake is correctly adjusted. If you can push the device, the rear brake must be re-adjusted.

Re-adjusting the rear brake:

Turn the adjusting screw (1) at the brake lever until the wheel lock while the brake is applied. When the adjustment is completed and the braking performance still has not improved, have an authorised service centre check the device.
Checking the drive

1. Place the device on a surface with a good grip (e.g. concrete or asphalt).
2. Switch off the engine.
3. Actuate the drive.
4. Try to pull the device backwards. If the rear wheels block, the drive is set correctly. If you can pull the device, the drive must be readjusted.

Checking the reverse gear

1. Put the device on a non-slip surface (e.g. concrete or asphalt).
2. Switch off the engine.
3. Actuate the reverse gear.
4. Try to pull the device backwards on its front wheels. If the front wheels lock, the reverse gear is correctly adjusted. If you can pull the device, the reverse gear must be re-adjusted.

Re-adjusting the reverse gear:

1. Release the lever for the reverse gear.
2. Unscrew the adjusting screw (1) to the point where the cable has no play. If there is no improvement after the adjustment, have the device checked by an authorised service centre.

Re-adjusting the drive

1. Release the drive lever.
2. Unscrew the adjusting screw (1) until the wheels lock while the drive lever is pulled and you are pulling the device.

If the adjustment does not show any improvement, have an authorised dealership check the device.
Checking the blade

⚠️ Warning
Wear or damage on the blades and the fastening elements can result in the blades or the fastening elements coming off.

► Check the blades and all fastening elements according to the following instructions.

⚠️ Warning
There is a considerable risk of injury due to improperly mounted and maintained blades.

► Work at blades must be carried out by an authorised service centre.

Use solid gloves when you check the blade.

Work on the blade requires specific expertise because an imbalance inspection is necessary and torques must be observed.

Blades that are sharpened improperly increase the workload of the device and can result in vibration cracks or breaks.

Check the blade and all fastening elements for wear, damage and cracks
– each time before and after you mow.
– in case of noticeable changes or unusual vibrations.

Contact an authorised service centre if you detect faults or damage during inspection.

All shown blade parts and their fastening elements must be changed
– if damage or cracks are detected.
– if unusually strong vibrations occur.
– at least once a year or every 50 operating hours, no matter if wear does exist or not.

The material weakens, can suffer cracks, endangering people and material assets. Ejected broken pieces can cause severe injuries.

Unusual vibrations are an indication that
– blades are missing or broken,
– the blade is worn excessively or on one side or
– damage to the engine or cutter deck fastening.

Blade change

It is absolutely necessary to change the blade:
– When one of the wear markings (1) was reached. Original blades are engraved with wear markings (marking in form of a ball-shaped imprint on the rear side of the blade).
– When the thickness of the blade at the rear edge of the vane (2) or at another point is below 1 mm (exception: cutting edge).

Original blade
An original AS-blade is engraved with:

AS XXXXXXXX

The engraving shows the spare part number.

Checking engine brake

Check the function of the engine brake by switching off the engine. The blade must come to a standstill from full speed within less than 3 seconds. Contact an authorised service centre if this is not the case.
Assembly

Scope of delivery

The device is shipped in a carton.
The scope of delivery includes:
– The device.
– This operating manual.
– Manufacturer’s certificate.
– Impact protection.
– Tool bag with small parts.

Unpacking

1. Remove the loose parts from the box.
2. Cut open the front side of the box.
3. Push the device out of the box.

Guide bar and handlebar

1. Flip the guide bar (1) backwards and engage it with the bar fixing (2).

Attention: Do not crush the Bowden cables (1) when fixing the handlebar.

1. Slacken the hexagon nut (2) at the eccentric lever (3) and remove the eccentric nut and the washer (4).
2. Apply the handlebar to the bar and re-insert the washer.
3. Turn the hexagon nut (2) until the eccentric lever can be tensioned with normal force and is positioned parallel to the bar.
4. Clamp the handlebar down with the eccentric lever.

Impact protection

⚠️ Warning

When mowing without mulching plate or impact protection, objects can be ejected.

► Mow only when the impact protection of mulching plate was installed.

1. Insert the attached 3 screws with square neck with a bigger disc from the inside of the device housing into the holes (1).
2. Thread the impact protection (2) and screw it down with 3 little discs and 3 nuts.
Storage

Storing the device

Keep the device in a closed, dry, and well ventilated room and out of reach of children. Always eliminate all problems of the device before you store it so that the device is always in a safe-to-operate state. Let the engine cool down before you store the device in closed rooms.

Longer storage

1. Observe the safety instructions for handling the fuel.
2. Emptying fuel tank. Place a piece of hose onto the fuel valve and let the fuel run into an approved fuel container.
3. Emtpying carburetor: Start the engine and let it run until it stops by itself.
4. Thoroughly clean the device.
5. Touch up any possible damage to the paint finish (for paint, see Accessories).

Before longer storage, e.g. in the fall, have an authorised service centre check the device!

Restarting

If you want to start the device after a longer storage, carry out the tasks described in chapter Maintenance.

Spare parts

The reliable and safe operation of the device also depends on the quality of the spare parts used. Only use original spare parts and accessories approved by “AS-Motor Germany.” When foreign parts are installed, the warranty and guarantee shall be void for the foreign parts, the device, and for any resulting damage.

Inform your authorized service center about the device type and serial number of your device when you order spare parts.

Via www.as-motor.com you have direct access to our spare parts portal. Here you can quickly find the right spare part using the search function and print out the corresponding spare parts list. This makes it easier for you to place the subsequent order via your authorised specialist workshop, stating the device type and the serial number of your device.

Wear parts

Some parts are wear parts. They wear during use and must be replaced. The warranty does not cover the following parts:

Blades, cutting blades, cutter bars, blade bolts, sliding plates, V-belt, chains, Bowden cables, starter ropes, pressure plates, air filters, spark plugs, disc springs, lock washers, fuses, discs, thrust plates, pressure discs, protection skirts, impact protection, wheels, tires.

Disposal

Grass clippings must not be thrown into the waste but should be composted.

Shredded plant material decomposes quickly, can be utilized as fertilizer, and, therefore, be left on the ground.

Dispose of waste oil and fuel in accordance with the local regulations or return it to an oil shop.

Packaging, device, and accessories are made of recyclable materials and must be disposed of accordingly.

Warranty

Please see our AS-Motor website for warranty information.

Please print out the documents that you receive during the online registration. Keep them together with your sales receipt.
**Troubleshooting**

The following table contains the most frequent problems and their elimination. If more problems occur, contact the closest authorised service centre.

You can find an authorised service centre on our home page [www.as-motor.com](http://www.as-motor.com).

<table>
<thead>

<td>0.4 (400)</td>
<td>0.2 (200)</td>
</tr>
</tbody>
</table>

Do not use mixtures with more oil than 1:50 (e.g. 1:35).

Too much oil results in carbon deposits and reduces the service life of the engine.

Only use the fully synthetic two-stroke oils explicitly intended for mixing. Do not use mineral two-stroke oil.

Use of engine oils or even waste oil results in engine damage.

No warranty is given in these cases.

THE HIGH GRASS MOWER AND 2 STROKE ENGINE MANUFACTURE

AS-Motor is your premium manufacturer for lawn and high grass mowers as well as 2 stroke engines. We offer our customers professional technology for steep slopes, rough terrain, and lawn care. Our extensive product range which includes hand-held entry-level devices up to the world’s first all-wheel ride-on mower with remote control will always offer private customers, municipalities service providers the right product. For more than 60 years, we have been developing and producing with a high production depth in Southern Germany and supply our dealer network in more than 30 countries all over the world.

<table>
<thead>
<tr>
<th>Product Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mulching mower</td>
<td>Mulching mower – the time-saving alternative! AS-Motor mulching mowers shred the grass to create such a fine mulch, almost an “invisible” fertiliser, that sinks right away back into the lawn. Disposal of the cuttings is not required.</td>
</tr>
<tr>
<td>Professional lawn mower</td>
<td>Professional lawn mowers with rear or side discharge for every requirement, even with all-wheel drive, brake and reverse gear.</td>
</tr>
<tr>
<td>Brush cutter®</td>
<td>An agile lawn mower for maintenance of extensive grassed areas. The Allmähler® reliably mows and mulches metre-high grass, brushes and weeds.</td>
</tr>
<tr>
<td>Flail mower</td>
<td>High grass with undergrowth, steep slope or extensive areas in unknown terrain? The movably mounted flail blades of the AS-Motor flail mower give way to rocks and obstacles and chop the cuttings several times over.</td>
</tr>
<tr>
<td>Ride-on brush cutter</td>
<td>If extensive areas, weeds and undergrowth up to 1.2 m, the AS-Motor all-wheel mowers are also perfect for steep and even extremely steep terrain. Ease of use and high area performance combined in one compact ride-on mower. For more safety, comfort and efficiency in difficult terrain we have developed the innovative and the world’s first remote controlled ride-on mower.</td>
</tr>
<tr>
<td>Rotary mower</td>
<td>The cost-effective alternative to the cutter-bar mower. Also ideal for feed production. The grass is not shredded but deposited in straight rows as a windrow next to the machine.</td>
</tr>
</tbody>
</table>
